The Jacksonville Transportation Authority believes in doing our part to protect the environment. In addition to providing mass transit services throughout Northeast Florida, JTA uses eco-friendly products and processes whenever possible in all departments across the agency.

**Did you know?**

- JTA’s fleet of buses and trolleys operate on ultra low sulfur diesel fuel, which burns cleaner and emits less exhaust emissions into the environment.

- Bus shelters have wireless security cameras and lighting which operate off solar power.

- A number of JTA’s buses and trolleys are equipped with particulate traps to help further decrease exhaust emissions. The agency is currently testing diesel fuel additives as another means to minimize emissions.

- JTA janitorial services and maintenance teams use green supplies.

- More than 20 buses put in to service since 2007 average 9% better mileage than the older buses.

- All existing lighting in the offices and shops is being replaced with energy-efficient bulbs.

- Energy-efficient HVAC control systems are installed in the JTA’s Administration Building and Skyway offices.

- JTA recycles used pallets and empty 55-gallon drums, as well as outdated printed materials and some corrugated cardboard, keeping these items from eventually winding up in area landfills.

- Green roof repairs are being performed on the operations building, bus maintenance and tire shop. The new roofing will reduce energy use in the buildings.
• JTA sponsors National “Dump the Pump” Day, an annual initiative to encourage individuals to try public transportation.

• Hybrid buses and hybrid vehicles for road supervisors are being purchased for better fuel efficiency.

Using JTA saves **MONEY**
1. No parking fees
2. No meters
3. No high gas prices
4. Less wear on personal vehicles

Using JTA saves the **PLANET**
1. Reduces pollution
2. Reduces smog
3. Reduces fuel consumption
4. Reduces carbon emissions

Using JTA saves **QUALITY OF LIFE**
1. Decreases traffic congestion
2. Reduces stress
3. Improves fitness levels

**Transit Facts:**

For every $1 billion invested in public transportation, 36,000 jobs are created or supported.

For every $1 invested in public transportation, $4 is generated in economic returns.

Public transportation is a vital link for more than 51 million Americans with disabilities.

Using public transportation saves 900,000 automobile fill-ups every day.
